

Cause and Effect

Climate Edition

Cause

Burning fossil fuels for energy in our home and/or cars.

Effect

Cause

Effect

Our oceans are filled with plastic and trash.

Cause

The warming of the earth and atmosphere is melting ice too quickly.

Effect

Cause

Effect

Animals lose their homes, carbon dioxide is released into the air, and less carbon dioxide is captured and put into the soil.

Cause and Effect

ANSWER SHEET

Cause

Burning fossil fuels for energy in our home and/or cars.

Effect

We create a greenhouse effect that warms our planet and pollutes our air and soil.

Cause

Over consumption, using single-use plastics, using items that can't be recycled, not recycling or disposing of our trash properly, trash finding it's way into streams and rivers that lead out to the ocean

Effect

Our oceans are filled with plastic and trash.

Cause

The warming of the earth and atmosphere is melting ice too quickly.

Effect

Rising sea levels, increased flooding, white ice that used to bounce heat off it's service now is melted and darker so it absorbs heat and causes quicker melting (feedback effect)

Cause

Cutting down trees (deforestation)

Effect

Animals lose their homes, carbon dioxide is released into the air, and less carbon dioxide is captured and put into the soil.
